2020
CONSTRUCTION UPDATE

Valley-Ivyglen Subtransmission Project

Strengthening the Region's Power Grid

Valley-Ivyglen Subtransmission Project

In August 2018 the California Public Utilities Commission (CPUC) issued its decision approving the Valley Ivyglen 115kV Subtransmission Project, which authorized the construction of a new 115 kV subtransmission line in the City of Menifee, City of Lake Elsinore, City of Perris and Riverside County. The new 115kV subtransmission line will help maintain reliability for current and projected demand for electricity.

The Project construction activities are anticipated to begin in 2020 and should take approximately 24 months to complete.

Construction Phase

SCE is currently preparing for the construction phase of the Project. SCE is committed to minimizing impacts from construction and providing updates to local officials, residents and businesses in the Project area.

Specifically, SCE will:

- Comply with applicable local ordinances and regulations, including dust control, noise ordinances, and other best management practices.
- Provide notification to affected property owners prior to construction activities, including information on street closures and other activities that could temporarily limit access for area residents.
- Ensure safety during all construction activities. Construction equipment will be removed or secured during non-working hours; open holes and potential hazards will be covered or marked.
